

University Admit Eligibility Predictor

Project Objectives:

College admissions predictions are a boon to many students. This not only helps students fill out their application forms, but also gives them an idea of their future university by calculating the cutoff.

When students come from rural areas, they find it difficult to keep up with formal procedures. So this application will help them a lot and relieve their anxiety.

Whatever the result, this application will help you find the best colleges. Therefore, our proposed computerized system can help students get a list of all colleges they can enroll at the click of a button.

Students simply enter grades such as GRE, TOFFEL, and UNIVERSITY RANK. This application makes it very easy for students to get a list of universities by department and by course. This not only makes the admission process easier, but it also minimizes stress for students. The main goal of our system is choosing the right university.
